REFRACTION POLICY & ACKNOWLEDGMENT OF RECEIPT

Refraction is the test that determines how much optical error (nearsightedness, farsightedness, and/or astigmatism) is present in each of your eyes. During the refraction, a series of trial lenses is placed in front of each eye to determine which combination gives you your best vision. This test determines your glasses prescription. **More importantly, refraction gives your doctor valuable information about your best possible vision and provides essential medical information to help fully assess your eyes and identify problems.** For example, if your vision has declined, the refraction helps your doctor determine if the decrease in vision is due to a need for glasses or from another medical problem. Additionally, refraction is necessary to prove to your insurance company that cataract surgery is necessary.

Refractions will be performed when medically necessary. Typically, we recommend refraction for every new patient, at least once per year for return patients, and for anyone with decreased vision.

We charge \$35 for ALL refractions, regardless of whether or not you get a new glasses prescription. This fee is in addition to any office co-pay or deductible for which you are responsible, and is **due at the time of service.**

The vast majority of *medical/health* insurances (including Medicare) do NOT cover the cost of refraction (i.e. it is a “non-covered” service). It is our government (for Medicare) and/or your insurance company (for commercial insurance companies) that determine exactly what services (including refraction) are covered or not covered -- not your physician. Some *vision* plans pay for refraction, but we do not accept vision plans here at this time.

NOTE: Should you decline refraction at your visit, and then you lose or break your glasses we will not be able to provide you with a replacement glasses prescription unless we have a current refraction done here within the past 2 years. Additionally, lack of refraction testing may limit our evaluation of your eyes.

Acknowledgment:

I have read the above/attached information and understand that the refraction may be a non-covered service. I accept full financial responsibility for the cost of the service and understand it is due at the time of service, unless it is covered by my insurance. I understand that my insurance company may have the final determination and I may receive a statement if my claim is denied. I understand that any co-payment, co-insurance, or deductible I have are separate from and not included in the refraction fee.

Medicare Part B - does not cover the refraction exam.

Please Note: That the technician or physician will inform you BEFORE a refraction needs to be performed and you will have the option to decline, with the understanding that declining the refraction exam may be limiting your physician's evaluation of your eyes.
